## Legal information

### Warning notice system

This manual contains notices you have to observe in order to ensure your personal safety, as well as to prevent damage to property. The notices referring to your personal safety are highlighted in the manual by a safety alert symbol, notices referring only to property damage have no safety alert symbol. These notices shown below are graded according to the degree of danger.

#### DANGER

indicates that death or severe personal injury **will** result if proper precautions are not taken.

#### WARNING

indicates that death or severe personal injury **may** result if proper precautions are not taken.

#### CAUTION

indicates that minor personal injury can result if proper precautions are not taken.

#### NOTICE

indicates that property damage can result if proper precautions are not taken.

If more than one degree of danger is present, the warning notice representing the highest degree of danger will be used. A notice warning of injury to persons with a safety alert symbol may also include a warning relating to property damage.

### Qualified Personnel

The product/system described in this documentation may be operated only by **personnel qualified** for the specific task in accordance with the relevant documentation, in particular its warning notices and safety instructions. Qualified personnel are those who, based on their training and experience, are capable of identifying risks and avoiding potential hazards when working with these products/systems.

### Proper use of Siemens products

Note the following:

#### WARNING

Siemens products may only be used for the applications described in the catalog and in the relevant technical documentation. If products and components from other manufacturers are used, these must be recommended or approved by Siemens. Proper transport, storage, installation, assembly, commissioning, operation and maintenance are required to ensure that the products operate safely and without any problems. The permissible ambient conditions must be complied with. The information in the relevant documentation must be observed.

### Trademarks

All names identified by ® are registered trademarks of Siemens AG. The remaining trademarks in this publication may be trademarks whose use by third parties for their own purposes could violate the rights of the owner.

### Disclaimer of Liability

We have reviewed the contents of this publication to ensure consistency with the hardware and software described. Since variance cannot be precluded entirely, we cannot guarantee full consistency. However, the information in this publication is reviewed regularly and any necessary corrections are included in subsequent editions.

# Preface

## Validity

This product information supplements the documentation for the ET 200SP and takes precedence over our system manuals, function manuals and product manuals.

You can find additional information on the fail-safe ET 200SP CPUs in the Product Information for F-CPUs on the Internet  
(<https://support.industry.siemens.com/cs/ww/en/view/109478599>).

## Security information

Siemens provides products and solutions with industrial security functions that support the secure operation of plants, systems, machines and networks.

In order to protect plants, systems, machines and networks against cyber threats, it is necessary to implement – and continuously maintain – a holistic, state-of-the-art industrial security concept. Siemens' products and solutions constitute one element of such a concept.

Customers are responsible for preventing unauthorized access to their plants, systems, machines and networks. Such systems, machines and components should only be connected to an enterprise network or the internet if and to the extent such a connection is necessary and only when appropriate security measures (e.g. firewalls and/or network segmentation) are in place.

For additional information on industrial security measures that may be implemented, please visit (<https://www.siemens.com/industrialsecurity>).

Siemens' products and solutions undergo continuous development to make them more secure. Siemens strongly recommends that product updates are applied as soon as they are available and that the latest product versions are used. Use of product versions that are no longer supported, and failure to apply the latest updates may increase customers' exposure to cyber threats.

To stay informed about product updates, subscribe to the Siemens Industrial Security RSS Feed visit (<https://www.siemens.com/industrialsecurity>).

---

### Note

The CM AS-i Master ST and F-CM AS-i Safety ST communication modules are supported as of firmware V1.8 of the CPUs. Note the following additional requirements:

#### **CM AS-i Master ST:**

- Firmware version of the CM AS-i Master ST: V1.1
- STEP 7 (TIA Portal): V13 SP1 Update 4 or higher

#### **F-CM AS-i Safety ST**

- Firmware version of the CM AS-i Safety ST: V1.0
  - STEP 7 (TIA Portal): as of V13 SP1 Update 4 and HSP0070 V3.0
-

10 AUX terminals (for BU15-P16+A10+2D, BU15-P16+A10+2B)			
• Yellow-green (terminals 1A to 10A); color code CC71	Pack of 10		6ES7193-6CP71-2AA0
• Red (terminals 1A to 10A); color code CC72	Pack of 10		6ES7193-6CP72-2AA0
• Blue (terminals 1A to 10A); color code CC73	Pack of 10		6ES7193-6CP73-2AA0
10 add-on terminals (for BU15-P16+A0+12D/T, BU15-P16+A0+12B/T)			
• Red (terminals 1B to 5B), blue (terminals 1 to 5C); color code CC74	Pack of 10		6ES7193-6CP74-2AA0

## 1.7 Accessories

Accessories, color identification labels (push-in terminals), 20 mm wide	Packaging unit		Article number
12 process terminals (you can find additional information in the I/O Module manual)			
• Gray (terminals 1 to 4), red (terminals 5 to 8), blue (terminals 9 to 12); color code CC41	Pack of 10		6ES7193-6CP41-2MB0
• Gray (terminals 1 to 8), red (terminals 9 and 10), blue (terminals 11 and 12), color code CC42	Pack of 10		6ES7193-6CP42-2MB0
6 process terminals (you can find additional information in the I/O Module manual)			
• Gray (terminals 1 to 4), red (terminal 5), blue (terminal 6); color code CC51	Pack of 10		6ES7193-6CP51-2MC0
• Gray (terminals 1, 2 and 5), red (terminals 3 and 4), blue (terminal 6); color code CC52	Pack of 10		6ES7193-6CP52-2MC0
4 AUX terminals (for BU20-P12+A4+0B)			
• Yellow-green (terminals 1A to 4A); color code CC81	Pack of 10		6ES7193-6CP81-2AB0
• Red (terminals 1A to 4A); color code CC82	Pack of 10		6ES7193-6CP82-2AB0
• Blue (terminals 1A to 4A); color code CC83	Pack of 10		6ES7193-6CP83-2AB0
2 AUX terminals (for BU20-P6+A2+4D, BU20-P6+A2+4B)			
• Yellow-green (terminals 1A and 2A); color code CC84	Pack of 10		6ES7193-6CP84-2AC0
• Red (terminals 1A and 2A); color code CC85	Pack of 10		6ES7193-6CP85-2AC0
• Blue (terminals 1A and 2A); color code CC86	Pack of 10		6ES7193-6CP86-2AC0

Accessories, color identification labels (push-in terminals) PotDis	Packaging unit	Article number
<b>PotDis-BU, 16 potential terminals</b>		
• Red for PotDis-BU-P1/x-R (terminals 1 to 16); color code CC62	Pack of 10	
• Blue for PotDis-BU-P2/x-B (terminals 1 to 16), color code CC63	Pack of 10	
<b>PotDis-TB-P1-R, 18 potential terminals</b>		
• Red (terminals 1 to 18); color code CC12	Pack of 10	
• Gray (terminals 1 to 18); color code CC10	Pack of 10	
<b>PotDis-TB-P2-B, 18 potential terminals</b>		
• Blue (terminals 1 to 18); color code CC13	Pack of 10	
• Gray (terminals 1 to 18); color code CC10	Pack of 10	

## 1.7 Accessories

Accessories, color identification labels (push-in terminals) PotDis	Packaging unit	Article number
PotDis-TB-BR-W, 18 potential terminals		
• Yellow/green (terminals 1 to 18); color code CC11	Pack of 10	
• Red (terminals 1 to 18); color code CC12	Pack of 10	
• Blue (terminals 1 to 18); color code CC13	Pack of 10	
• Gray (terminals 1 to 18); color code CC10	Pack of 10	
PotDis-TB-n.c.-G, 18 potential terminals		
• Gray (terminals 1 to 18); color code CC10	Pack of 10	

Accessories for motor starter	Packaging unit	Article number
3DI / LC module	Pack of 1	3RK1908-1AA00-0BP0
Fan	Pack of 1	3RW4928-8VB00
Additional mechanical bracket for BaseUnit	Pack of 1	3RK1908-1EA00-1BP0
Cover for an empty BaseUnit	Pack of 1	3RK1908-1CA00-0BP0
Touch protection cover for infeed bus	Pack of 1	3RK1908-1DA00-2BP0

# Supplements to ET 200SP documentation

## 2.1 BaseUnits manual

### 2.1.1 Special consideration for BaseUnits with functional versions < 04

The following BaseUnits with functional version < 04 can only be used in potential groups with rated voltages  $\leq$  48 V DC or 24 V AC:

- BaseUnit BU20-P12+A0+4B (6ES7193-6BP20-0BB1).
- BaseUnit BU20-P12+A0+0B (6ES7193-6BP00-0BD0).

## 2.2 CPU manuals

### Technical specifications

The Technical Specifications section in the CPU equipment manuals indicates the status of the technical specification at the respective edition date. You can find a data sheet including daily updated technical specifications on the Internet (<https://support.industry.siemens.com/cs/ww/en/ps/13888/td>).

### Manual CPU 1512SP-1 PN, Edition 09/2016

#### Section 4.1 Status and error display of the CPU

MT1/MT2 LEDs on BusAdapter BA 2xSCRJ, BA SCRJ/RJ45, BA SCRJ/FC

Table 2- 1 Status and error displays of MT1/MT2 LEDs

LED	Meaning	Solution
<b>MT1/MT2*</b>		
Off	No error	---
On	<ul style="list-style-type: none"> <li>• Fiber-optic error</li> <li>• Maintenance demanded: Attenuation through the fiber-optic cable is so high that operation will soon no longer be possible.</li> </ul>	<p>Causes and measures for the transmission route:</p> <ul style="list-style-type: none"> <li>• Replacement of fiber-optic cable if damaged or aged</li> <li>• Correct installation of the PROFINET connector/PROFINET connections</li> <li>• Adherence to maximum length of 50 m for POF cable or 100 m for PCF cable</li> <li>• Secure fit of the FOC connector.</li> </ul>

\* Only available on BusAdapter BA 2xSCRJ

## **Section 6 Technical specifications**

Technical specifications of the BusAdapters BA 2×SCRJ, BA SCRJ/RJ45, BA SCRJ/FC

The maximum length of the PCF-GI fiber-optic cable is 250 m.

## **Device manuals CPU 1510SP-1 PN and CPU 1512SP-1 PN, Edition 09/2016**

### **"LED" instruction**

You can read the status (e.g. "On" or "Off") of LEDs of a CPU or a module using the "LED" instruction. Note, however, that is not possible to read the LED status of the LINK RX/TX LEDs of the CPU 1510SP-1 PN and CPU 1512SP-1 PN.

You can find additional information on the "LED" instruction in the STEP 7 online help.

## 2.3 Interface module manuals

### Configuration notes on interface modules depending on the I/O modules

Module		IM 155-6 PN BA	IM 155-6 PN ST					IM 155-6 PN HF								IM 1 55- 6 PN HS	IM 155-DP HF					
			Firm- ware version	V3.2	V1. 0	V1. 1	V3. 1	V3. 3	V4. 1	V2. 0	V2. 1	V2. 2	V3. 0	V3. 1	V3. 3	V4. 2	V1. 0	V1. 1	V3. 0	V3. 1	V4. 2

### Compilation error up to STEP 7 V15.1 for IM 155-6 PN HF as of V2.1, IM 155-6 PN HS V4.0

Affected components:

- IM 155-6 PN HF as of V2.1
- IM 155-6 PN HS V4.0

A compilation error can occur in isochronous mode of the ET200SP (IM 155-6 PN HF as of V2.1, IM 155-6 PN HS V4.0) with the setting "From OB" even if the settings are valid. The typical error message is: "The specific Ti value is invalid" or "The specific To value is invalid". But other error messages are possible as well.

Solution:

Upgrade the module description of the IM in this case. You can upgrade the module description of the IM in the network view or in the device view of the inspector window with the function "Update module description". The error can still occur with the current module description after the first compilation. If you have selected valid settings, the error will no longer occur with the subsequent compilation.

## IM 155-6 PN ST Manual, Edition 04/2017

### Response times

The response time of the IM 155-6 PN ST is made up of:

- Backplane bus cycle time
- Operating system processing

### Note

#### Validity of the formula

The following formula applies to the ET 200SP backplane bus.

The formula does not apply to the ET-Connection bus.

### Backplane bus cycle time

The backplane bus cycle time is the time the interface module requires to output new output data, read new input data and then copy the data to the PROFINET send buffer.

The backplane bus cycle time is the result of the update time configured for the interface module as IO device and amounts to at least 1 ms.

- If the configured update time  $\geq$  1 ms, the backplane bus cycle time is equal to the configured update time.
- If the configured update time  $<$  1 ms, the backplane bus cycle time is the product of an integer multiple of the configured update time.

Table 2- 2 Example calculation

Configured update time	Backplane bus cycle time (integer multiple, minimum 1 ms)
250 µs	4 x 250 µs = 1000 µs
750 µs	2 x 750 µs = 1500 µs
1000 µs	1000 µs
2000 µs	2000 µs

### Operating system processing time

The operating system processing time is calculated based on the following formula:

#### Operating system processing time output

Operating system processing time\_output[µs] = 147 + 3.775 number\_m + 0.275 bytes\_out

#### Operating system processing time input

Operating system processing time\_input[µs] = 158.3 + 2.325 number\_m + 0.325 bytes\_in

**Explanation of the parameters:**

Number\_m: Total number of all modules (incl. server module)

Bytes\_out: Sum of all output bytes

Bytes\_in: Sum of all input bytes

**Calculating the response time**

**Response time output**

The response time output of the IM 155-6 PN ST is made up of:

- Backplane bus cycle time
- Operating system processing time\_output.

**Response time input**

The response time input of the IM 155-6 PN ST is made up of:

- Backplane bus cycle time
- Operating system processing time\_input.

## Equipment manual IM 155-6 PN/3 HF, Edition 10/2018

### Section 2.2 Functions

The "Interface-local coupling of IO data" function can also be used in addition to GSDML with STEP 7 (TIA Portal) as of V15.1 with HSP285.

### Table 2-1 Version dependencies of the module functions

The "Interface-local coupling of IO data" function is possible with STEP 7 (TIA Portal) as of V15.1 with HSP285.

### Section 6 Compatibility

#### Restoring the factory settings on the interface module via the RESET button

There is a special operation for interface module IM 155-6 PN/3 HF to reset it to the factory settings using the Reset button.

#### Requirements

The supply voltage to the interface module must be switched on.

#### Required tool

3 to 3.5 mm screwdriver (for resetting via the RESET button)

#### Procedure

1. Remove the interface module from the mounting rail and swivel it downwards.
2. The RESET button is located on the back of the interface module behind a small opening:  
Push a screwdriver into the small opening, thus pressing the RESET button.
3. Release the RESET button.
4. Press the RESET button for another 3 seconds.
5. Look at the LED display of the interface module to see whether the reset was successful:  
RUN LED flashes for 3 seconds, ERROR and MAINT LED are off.
6. Install the interface module back on the mounting rail.
7. Configure the interface module again.

## IM 155-6 PN HF manual, Edition 12/2015

### Section 3.1 Pin assignment

PROFINET interface X1 Port 2:

If autonegotiation is disabled, the RJ-45 socket (X1 Port 2) has the switch assignment (MDI-X).

## **IM 155-6 PN HS manual, Edition 09/2016**

### **Section 3.1 Pin assignment**

PROFINET interface X1 Port 2:

If autonegotiation is disabled, the RJ-45 socket (X1 Port 2) has the switch assignment (MDI-X).

### **Section 7 Technical specifications**

- The PROFINET certification of network Class 3 is in preparation.
- Technical specifications of the BusAdapters BA 2×SCRJ, BA SCRJ/RJ45, BA SCRJ/FC:  
The maximum length of the PCF-GI fiber-optic cable is 250 m.

## 2.4 I/O module manuals

**Configuration notes on the I/O modules**  
 (supplement to Product overview section in the manual)

I/O module		Article number	Firmware version	STEP 7 (TIA Portal)	STEP 7 V5.5 SP3

## 2.4.1 Digital module device manuals

### Manuals for I/O modules ST, BA

When you have deactivated all channels of the I/O module, a diagnostics alarm is still generated in the case of a fault if the "Missing supply voltage L+" diagnostics is enabled. For the following I/O modules, this behavior is corrected as of firmware version > V1.1.0:

- DI 16x24VDC ST
- DI 8x24VDC ST
- DQ 16x24VDC/0.5A ST
- DQ 8x24VDC/0.5 A ST
- DQ 4x24VDC/0.5A ST

### Manuals for digital input modules with wire-break detection

When wire-break detection is configured the module requires a low quiescent current at the digital input in case of "0" signal for the monitoring. The parallel connection of a resistor with 25 kΩ to 45 kΩ is required in order that this quiescent current can flow when encoder contacts are open.

If wire-break detection is disabled in the configuration, no parallel connection of the resistor is required.

If wire-break detection is configured, connect a resistor with 25 kΩ to 45 kΩ parallel to each mechanical encoder contact.

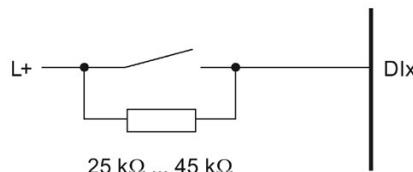

Figure 2-1 Connect mechanical encoder contact with resistor

### Manuals DI 4x120...230VAC ST, Edition 02/2014; DQ 4x24...230VAC/2A ST, Edition 02/2014

#### Section 4.3 Address space

If you have enabled value status, the module returns value status 1, regardless of the state of the connected supply voltage.

### Manual DI 8x24VDC HF, Edition 02/2014

#### Section 6.1 Technical specifications

- 24 V encoder supply
  - Output current, max.: 700 mA, total current

**Manual DI 8xNAMUR HF, Edition 02/2014****Section A.2 Parameter assignment and structure of parameter data record**

With data records 0 to 7, you can configure individual channels.

When the interface module IM 155-6 DP HF (PROFIBUS DP) is used and data records 0 and 1 are read, the module returns the diagnostics data records and not the parameter data records of the DI 8xNAMUR HF.

**DQ 4x24VDC/2A HS manual, Edition 09/2016****Section 6.1 Technical specifications**

For this module, the marine approval for the bridge and deck zone is valid from a bus cycle time of at least 250 µs.

**Manual DQ 4x24..230VAC/2A ST digital output module, Edition 03/2015****Section 3.1 Pin assignment; Supply voltage fuse protection**

The module has neither short-circuit protection nor overload protection. Protect the module from being destroyed by impermissible high current and install a fine fuse in the supply line. The maximum rated current of the fine fuse depends on the hardware function status (FS) of the module.

HW functional status of the module	Max. rated current of fuse	Tripping characteristic
FS ≤ 3	8 A	Quick response
FS ≥ 4	10 A	Quick response

**Section 6.1 Technical specifications, Switching frequency with inductive load**

The switching frequency of the outputs with inductive loads is max. 0.5 Hz.

Higher switching frequency is possible in spite of this, and depends on the alternating voltage and switched inductors or the power factor of the electric motor used.

Alternating voltage	Condition	Max. switching frequency
200 VAC or lower	---	10 Hz
200 VAC or higher	<ul style="list-style-type: none"> <li>• Power factor of the electric motor <math>\cos \varphi &gt; 0.35</math></li> <li>• Electric motor must only be turned off after startup (no jogging mode).</li> </ul> <p>Electric motors which are turned off during startup could create inductive shutoff voltages &gt; 600 V, which could destroy the output electronics (Triac).</p>	10 Hz

## DQ 4x24..230VAC/2A HF Manual, Edition 02/2018

### Section 3.1.1. und 4.1.1 Wiring and block diagram

The following figure shows an example for the terminal assignment of the digital output module DQ 4x24...230VAC/2A HF on the BaseUnit BU type U0 (3-wire connection) in combination with a potential distribution module and terminal block.

For a 3-wire connection you connect the protective earth (PE) of the actuator to the terminal block.

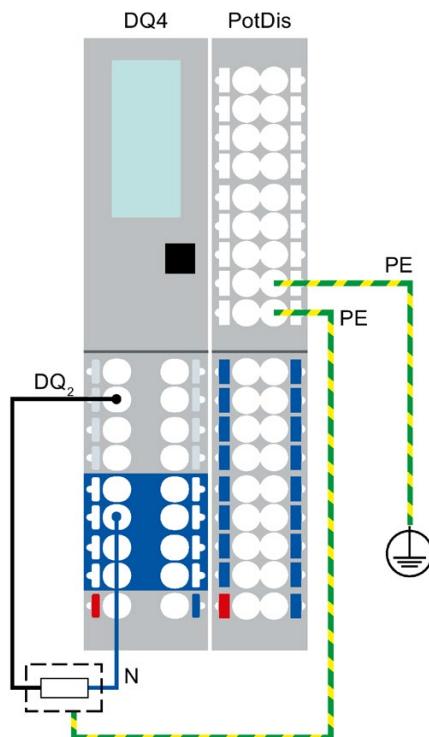

Figure 2-2 3-wire connection of actuators with potential distribution module at the digital output module DQ 4x24...230VAC/2A HF

## Equipment manual RQ 4x120VDC-230VAC/5A NO MA ST, Edition 12/2015

### Section 3.1 Wiring and block diagram

The AUX terminals of the self-assembling voltage bus can be used for the connection of the protective conductor (PE) or for voltages up to a maximum of 24 V DC.

## 2.4.2 Analog module device manuals

### Manuals for analog input modules

Manual	Edition
AI 8xI 2-/4-wire BA	03/2015
AI 8xU BA	03/2015
AI 2xU ST	12/2015
AI 4xI 2-wire 4..20mA HART	11/2014
AI 2xU/I 2-/4-wire HF	12/2015

### Section 5.2 Parameters

#### Note

Note that the settings in the "Interference frequency suppression" parameter have a direct effect on the cycle time of the module. The analog value is therefore also affected by additionally set filtering via the "Smoothing" parameter.

### Manuals AI 2xU/I 2-/4-wire HF, Edition 12/2015; AI Energy Meter 480VAC ST, Edition 12/2015

For configuration with STEP 7 V13 or higher (TIA Portal), real values between  $-7 \times 10^{28}$  and  $+7 \times 10^{28}$  can be input. This is true for configuration via HSP and via GSD file (PROFINET).

For configuration with STEP 7 V5.5 SP4 as of HF7, configuration by means of GSD file (PROFINET) with REAL values of  $-1.175 \times 10^{38}$  to  $+3.402 \times 10^{38}$  is possible.

With STEP 7 SP4 to HF6, parameter assignment of REAL values is not possible. Functions that require REAL values are not available in this case.

### Manuals AI Energy Meter 400VAC ST, Edition 12/2015; AI Energy Meter 480VAC ST, Edition 12/2015

Requirements for the operation of the AI Energy Meter on slot 1 of the ET 200SP:

Interface module / CPU	AI Energy Meter 400VAC ST (6ES7134-6PA01-0BD0)	AI Energy Meter 480VAC ST (6ES7134-6PA20-0BD0)
IM 155-6 PN BA (6ES7155-6AR00-0AN0)	Can be operated on slot 1 for all IM 155-6 PN BA	
IM 155-6 PN ST (6ES7155-6AU00-0BN0)	Can be operated on slot 1 for IM 155-6 PN ST from firmware version V3.1 and higher and functional status FS 07	
IM 155-6 PN HF (6ES7155-6AU00-0CN0)	Can be operated on slot 1 for IM 155-6 PN HF from firmware version V3.0 and higher and functional status FS 05	
IM 155-6 DP HF (6ES7 155-6BU00-0CN0)	Can be operated on slot 1 for IM 155-6 DP HF from firmware version V3.0 and higher	
CPU 1510SP-1 PN, CPU 1512SP-1 PN, CPU 1515SP PC	Can be operated on slot 1 for all CPUs	

## In the manual for Energy Meter 480VAC ST, Edition 12/2015

In the device manual for Energy Meter 480VAC ST, the measured value ID and the associated measured variables for the complete performance are reversed. The correct association is shown in the table below:

Measured value ID	Measured variables	Unit
34	Total active power L1L2L3	W
35	Total reactive power L1L2L3	var
36	Total apparent power L1L2L3	VA
65	Max. total active power	W
66	Max. total reactive power	var
67	Max. total apparent power	VA
95	Min. total active power	W
96	Min. total reactive power	var
97	Min. total apparent power	VA

If you use the user-data mapping via data record DS 130, note that the texts for the measured variables are also displayed incorrectly during configuration.

During configuration of the measured variables for the total active, reactive, and apparent power, select the following texts:

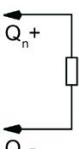

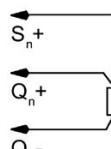

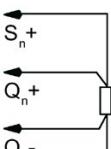

Desired measured variable for the user-data mapping	Text to select during configuration
Total active power L1L2L3	Total apparent power L1L2L3 (ID00034)
Total reactive power L1L2L3	Total active power L1L2L3 (ID00035)
Total apparent power L1L2L3	Total reactive power L1L2L3 (ID00036)
Max. total active power	Max. total apparent power (ID00065)
Max. total reactive power	Max. total active power (ID00066)
Max. total apparent power	Max. total reactive power (ID00067)
Min. total active power	Min. total apparent power (ID00095)
Min. total reactive power	Min. total active power (ID00096)
Min. total apparent power	Min. total reactive power (ID00097)

The project configuration modification described above is no longer required if the following tools and GSD files are used:

- STEP 7 (TIA Portal) as of V14
- STEP 7 (TIA Portal) as of V5.5 SP4 with HSP 0227
- GSD file GSMDL-V2.32-ET200SP-20160706

**Manual for AQ 2xU/I HF, Edition 02/2014****Section 3.1 Wiring and block diagram, pin assignment**

You can now also use the 3-wire connection in addition to the 2-wire and 4-wire connection for the analog module AQ 2xU/I HF.

Pin assignment for AQ 2xU/I HF			Explanation
Voltage 2-wire connection 	Voltage 3-wire connection 	Voltage 4-wire connection 	<ul style="list-style-type: none"> <li>• Qn+: Analog output voltage/current (positive), channel n</li> <li>• Qn-: Analog output voltage/current (negative), channel n</li> <li>• Sn+: Sensor line positive, channel n</li> <li>• Sn-: Sensor line negative, channel n</li> </ul>

The 3-wire connection and 4-wire connection make compensation for line impedance possible. The compensation is not possible for 2-wire connections due to the missing sensor cable.

**2.4.3 Communications module manuals****Communications module CM DP, Edition 12/2014**

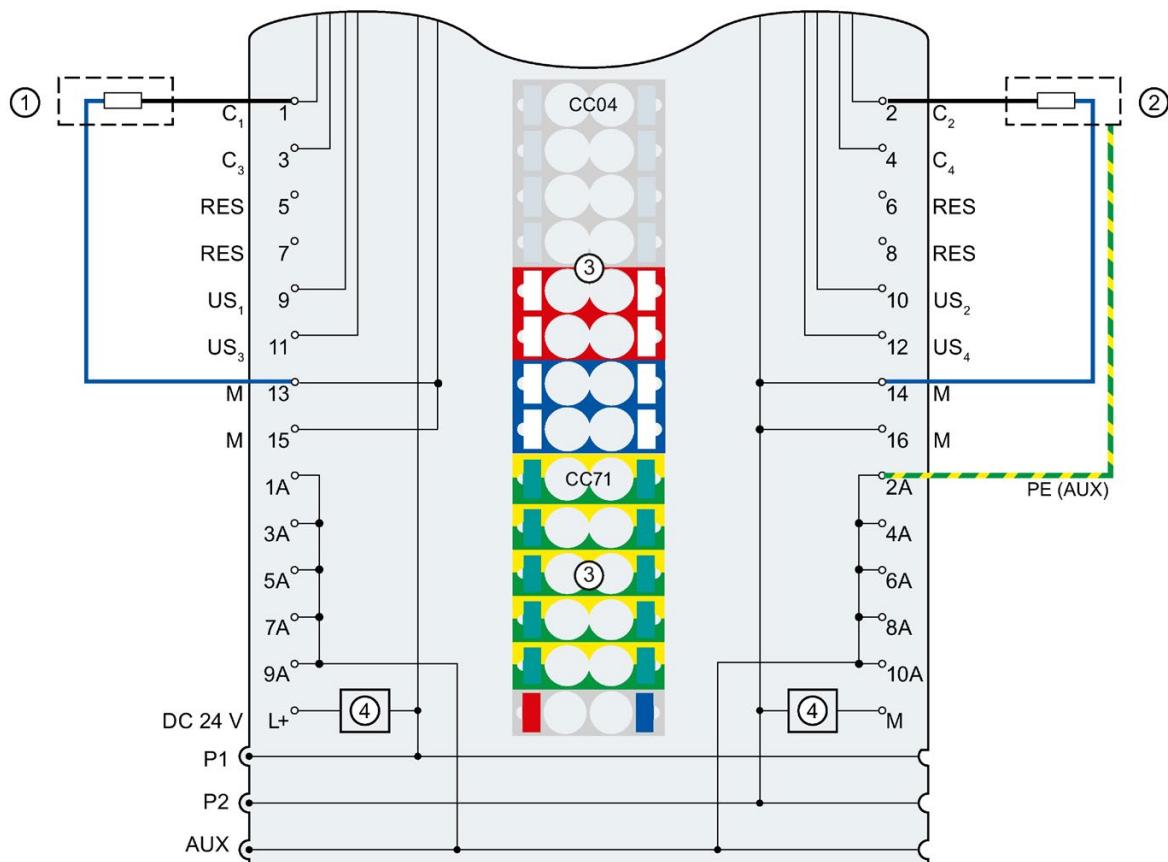

The communications module CM DP supports the PROFIsafe protocol V2.

Exception: Fail-safe modules that only support PROFIsafe V1 mode.

## Communications module IO-Link Master CM 4xIO-Link, Edition 10/2017

### Section Connecting, Wiring and block diagram

Connection: 2-wire and 3-wire connection in DQ operating mode:

①	2-wire connection	1 A to 10 A	AUX terminals
②	3-wire connection	PE (AUX)	Protective conductor connection
③	Color-coded labels with color code CC04 and CC71 (optional)	P1, P2, AUX	Internal self-assembling voltage buses Connection to the left (dark-colored BaseUnit) Connection to the left interrupted (light-colored BaseUnit)
④	Filter connection supply voltage (only when light-colored BaseUnit is present)	C <sub>n</sub>	Communication signal, DI, DQ
24 V DC	Supply voltage L+ (infeed for light-colored BaseUnit only)	RES	Reserved, must not be assigned
M	Ground	US <sub>n</sub>	Supply voltage (positive)
